Mark Tan

Reshaping the Future of Programming Through Blockchain Implementation

Setapak

Summary

My passions reside at the intersection of technology, entrepreneurship, financial services, and innovation.

In my career, I strive to help companies achieve more by implementing cutting edge technology and solving complex problems in simple ways.

My background as an entrepreneur and a programmer gives me a unique perspective that helps me envision the next great technological innovations that will that will ultimately yield significant benefits.

In my work, I spearhead innovative initiatives that leverage the latest tools and technologies to introduce leading edge products and services to market, as well as foster new ways of working.

I love my work because of the interesting problems I solve. I enjoy challenging and thought provoking work and have a strong desire to continually learn and progress. I'm also comfortable working with ambiguity (e.g. imperfect data, loosely defined concepts, ideas, or goals). It's thrilling to translate these input into tangible outputs that my team and clients can build upon.

I've found that three things have lead to success in my career:

- i. My strong analytical and critical thinking skills
- ii. My structured, disciplined approach to work, with attention to detail
- iii. My flexibility and ability to meet changing requirements and priorities

In all things, I strive to maintain a positive, customer-focused attitude approach. My colleagues and clients can attest to my interpersonal skills and willingness to listen

If you share similar passions, I look forward to connecting!

Specialties

- I. Blockchain Developer
- II. Smart Contract Developer
- III. ICO Development
- IV. Web Development
- V. Web Full Stack Developer
- VI. Yii & PHP experienced developer
- VII. LAMP stack developer
- VIII. Nodejs developer
- IX. Entrepreneurship
- X. Token sales for ICO
- XI. Blockchain Startup Company
- XII. Cryptocurrency & ICO investor

Experience

VWinners Technology Sdn Bhd

Programmer & Founder

December 2015 - Present (6 years 1 month)

As Lead Programmer and Founder of VWinners Technology Sdn Bhd it is my job is to play, explore, hack, break things, and ultimately fix them. In the end, this leads to products and solutions they're better and more valuable to the end user.

In my role, I provide end to end service, designing, developing, testing and managing all IT related works include programming, server setup, advisory and project planning. In this role I work to build POCs quickly to show what's possible to my client partners.

When working collaboratively with my clients, I provide a hands on approach that involved brainstorming, evaluating applications for new technologies and tools as they continue to evolve, participating in technical reviews as part of the development process and attending to administrative duties of daily scrums, back log grooming, and sprint planning sessions.

In past successful jobs, I have experience contributing to the architecture, design, and implementation of CMS websites for SME with self built CMS systems. Key areas of focus are Yii framework, event app for HBE and Ionic framework that integrates with Apache.

Xingularity

Programmer & Founder

September 2017 - November 2018 (1 year 3 months)

Selangor, Malaysia

As leader of Xingularity, I understand the ins and outs of financial markets, as well as how technology can be intelligently applied to augment human performance. Xingularity is a fast-paced, collaborative, development team, that's focused on building the latest in innovative and disruptive technologies. At Xingularity, we believe in the power of saying "We can..." is always more important than "we can't because..."

I love my role as business founder, since it allows me the opportunity to deploy a well-rounded set of skills relating to Blockchain platforms such as Hyperledger and Ethereum, as well as programming languages like Javascript, Java and others.

As leader of the team, I strive to foster a development team culture that's enthusiastic and passionate about speed, quality, automation, and continuous delivery. My team is also responsible for evaluating technology as it evolves, so it goes without saying that we thrive in dynamic, uncertain, and changing conditions.

Funnel Malaysia Sdn. Bhd.
