Summary

I am currently studying in the field of Computer Science, which is a course that has taught me as many skills as it has given me knowledge. To add onto that, I am filled with a deep passion for Data Science, together with the art of trading and investing.

Furthermore, I have indulged myself in learning the art of programming in different languages, such as: HTML, CSS, C++, Javascript, and SQL. Together with this knowledge, I have learnt to use Figma, which I then used to build a web application during my foundation year.

On the other hand, to fuel my interest in the world of trading and investing, I have taken it upon myself to enroll in "The Protege", a course by the Asri Ahmad Academy, which helps me advance my financial instincts, making me a well minded investor and trader.

Furthermore, I find topics such as: international affairs, global diplomacy, and global economics to be a very interesting issue in which I would be delighted to talk about. Do feel free to get in contact with me to know more about the topics I find interesting!

Education

Universiti Teknologi PETRONAS
Bachelor of Computer Science · (September 2021 - December 2024)

Heriot-Watt University Malaysia
Foundation, Computer Science · (2020 - 2021)
